AjoChain

Save in a circle. In Bitcoin-backed dollars.

Rotating savings circles in MUSD on Mezo, where everyone’s locked collateral earns BTC in Mezo’s Stability Pool while they save.

Mezo Buildathon 2026 · Wave 2 · Tracks 1 and 2 · Chisom Caleb Ogueji (0xgeneral), Lagos

THE PROBLEM

Ajo runs on trust

Ajo, esusu and adashe are how millions of Nigerians already save: everyone pays in, one member takes the pot, and it rotates.

The collector can vanish

Whoever holds the pot can disappear with everyone’s money.

Early receivers stop paying

Once a member has had their turn, nothing makes them keep paying in.

Savings lose value

The naira can lose value between paying in and finally collecting the pot.

THE MARKET

One tradition, every continent

Rotating savings circles have been around for generations, built on trust between members and on a collector who holds the money.

17%

Nigeria · Ajo, esusu

of adults save in an informal savings group

41%

Kenya · Chama

of Kenyans use chamas: about 300,000 groups holding roughly KSh 300bn

1 in 5

Ghana · Susu

adults use structured informal savings or borrowing groups

1 in 5

Mexico · Tanda

savers use tandas, the country's second most popular informal method

Also **susu** and **partner** across the Caribbean, and **hui** in China.

> **The weak point is the same everywhere: 13% of Kenyan chama members have lost money in their group. AjoChain keeps the circle and replaces the collector with a smart contract.**

THE SOLUTION

The contract holds the pot

1

Join

Lock one contribution as collateral. The circle starts when the last seat fills.

2

Pay

Every member pays the same amount each round, in MUSD.

3

Payout

The full pot goes to one member, in join order, as soon as everyone has paid.

4

Finish

Collateral comes back with BTC earnings, plus a soulbound savings badge.

Miss a round? Anyone can close it after the deadline. Your collateral covers the payment, the recipient still gets the full pot, and you lose the badge.

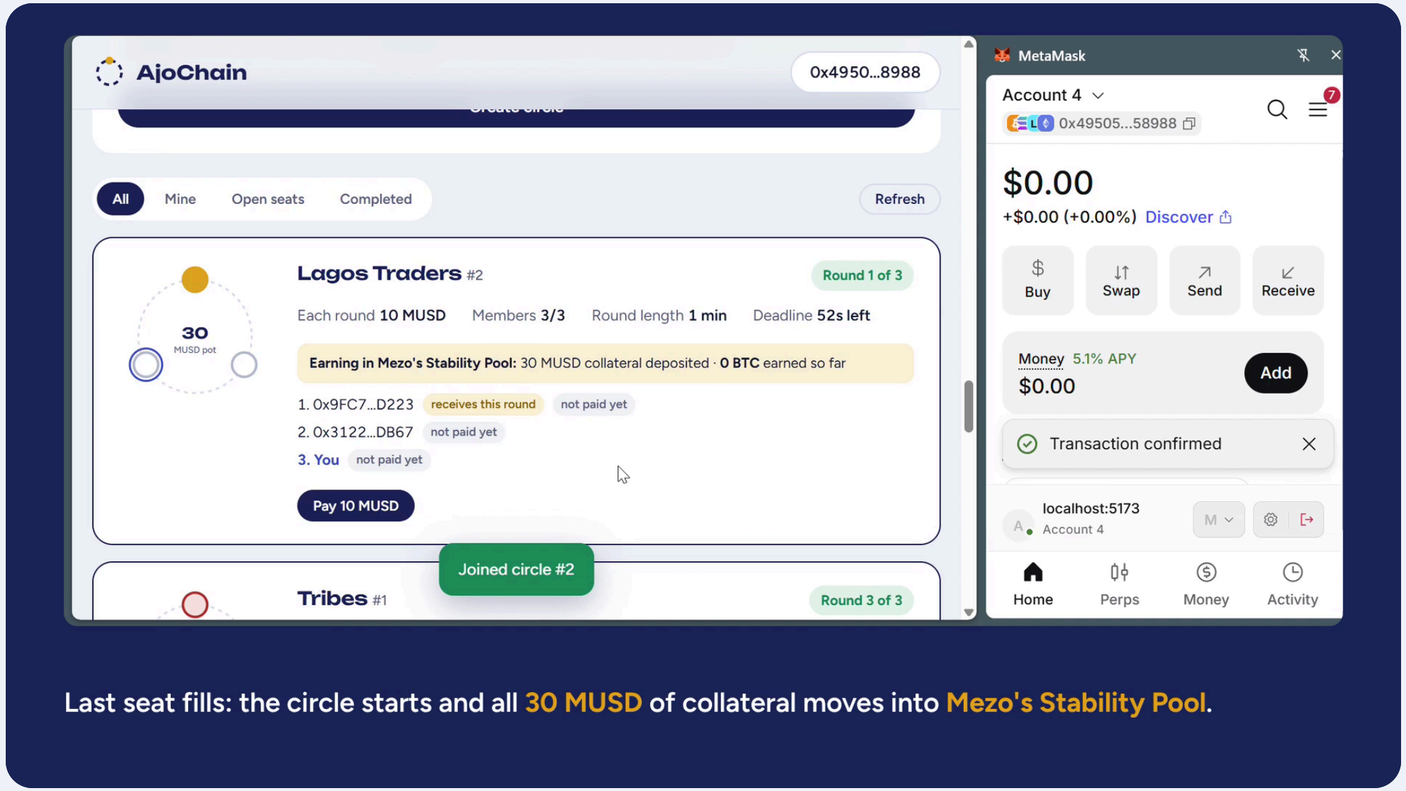

MEZO INTEGRATION

Collateral that earns BTC

Feature	What happens	Mezo call
MUSD circles	Contributions, pots and collateral in MUSD. MEZO circles too.	MUSD, MEZO token
Earn while you save	All collateral sits in the Stability Pool for the whole cycle and earns BTC from liquidations.	provideToSP
Fair share vault	One pool position split across circles by shares and a BTC-per-share accumulator.	getCompoundedMUSDDeposit
Defaults from the pool	A missed payment is withdrawn from the pool, so the pot stays full.	withdrawFromSP
Unblock pool	When a loan below 110% pauses the pool, one click liquidates it.	batchLiquidateTroves
Claim BTC	Members withdraw their share of the BTC after the cycle.	claimBTC

DEMO

Live on Mezo testnet

Last seat fills: the circle starts and all 30 MUSD of collateral moves into Mezo's Stability Pool.

Lagos Traders: 10 MUSD a round, 3 members

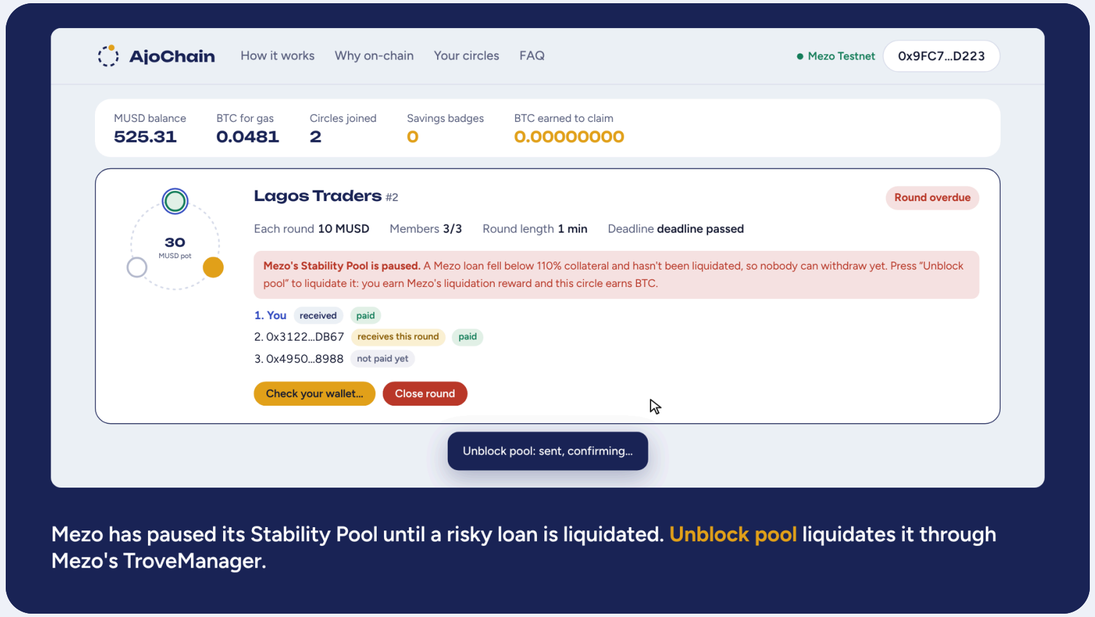

Three wallets joined, each locking 10 MUSD.

The last seat filled, the circle started, and all 30 MUSD of collateral moved into Mezo's Stability Pool.

ajochain-frontend.vercel.app

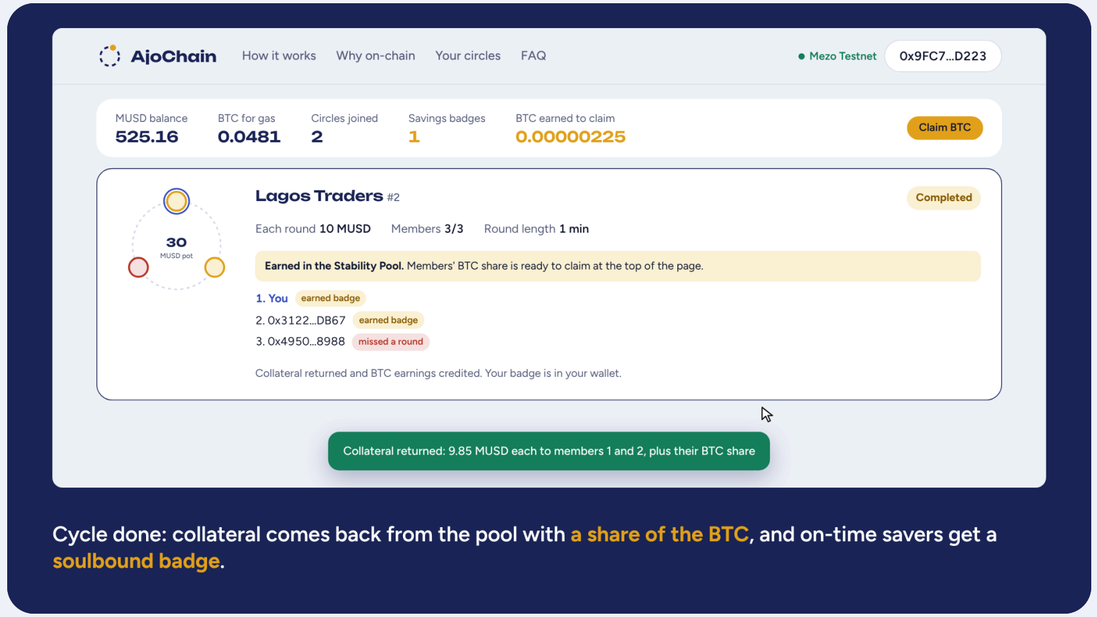

DEMO

Through the whole cycle

Mezo has paused its Stability Pool until a risky loan is liquidated. **Unblock pool** liquidates it through Mezo's TroveManager.

Pool paused? Unblock pool liquidates the risky loan through Mezo's TroveManager, and the circle earns the BTC.

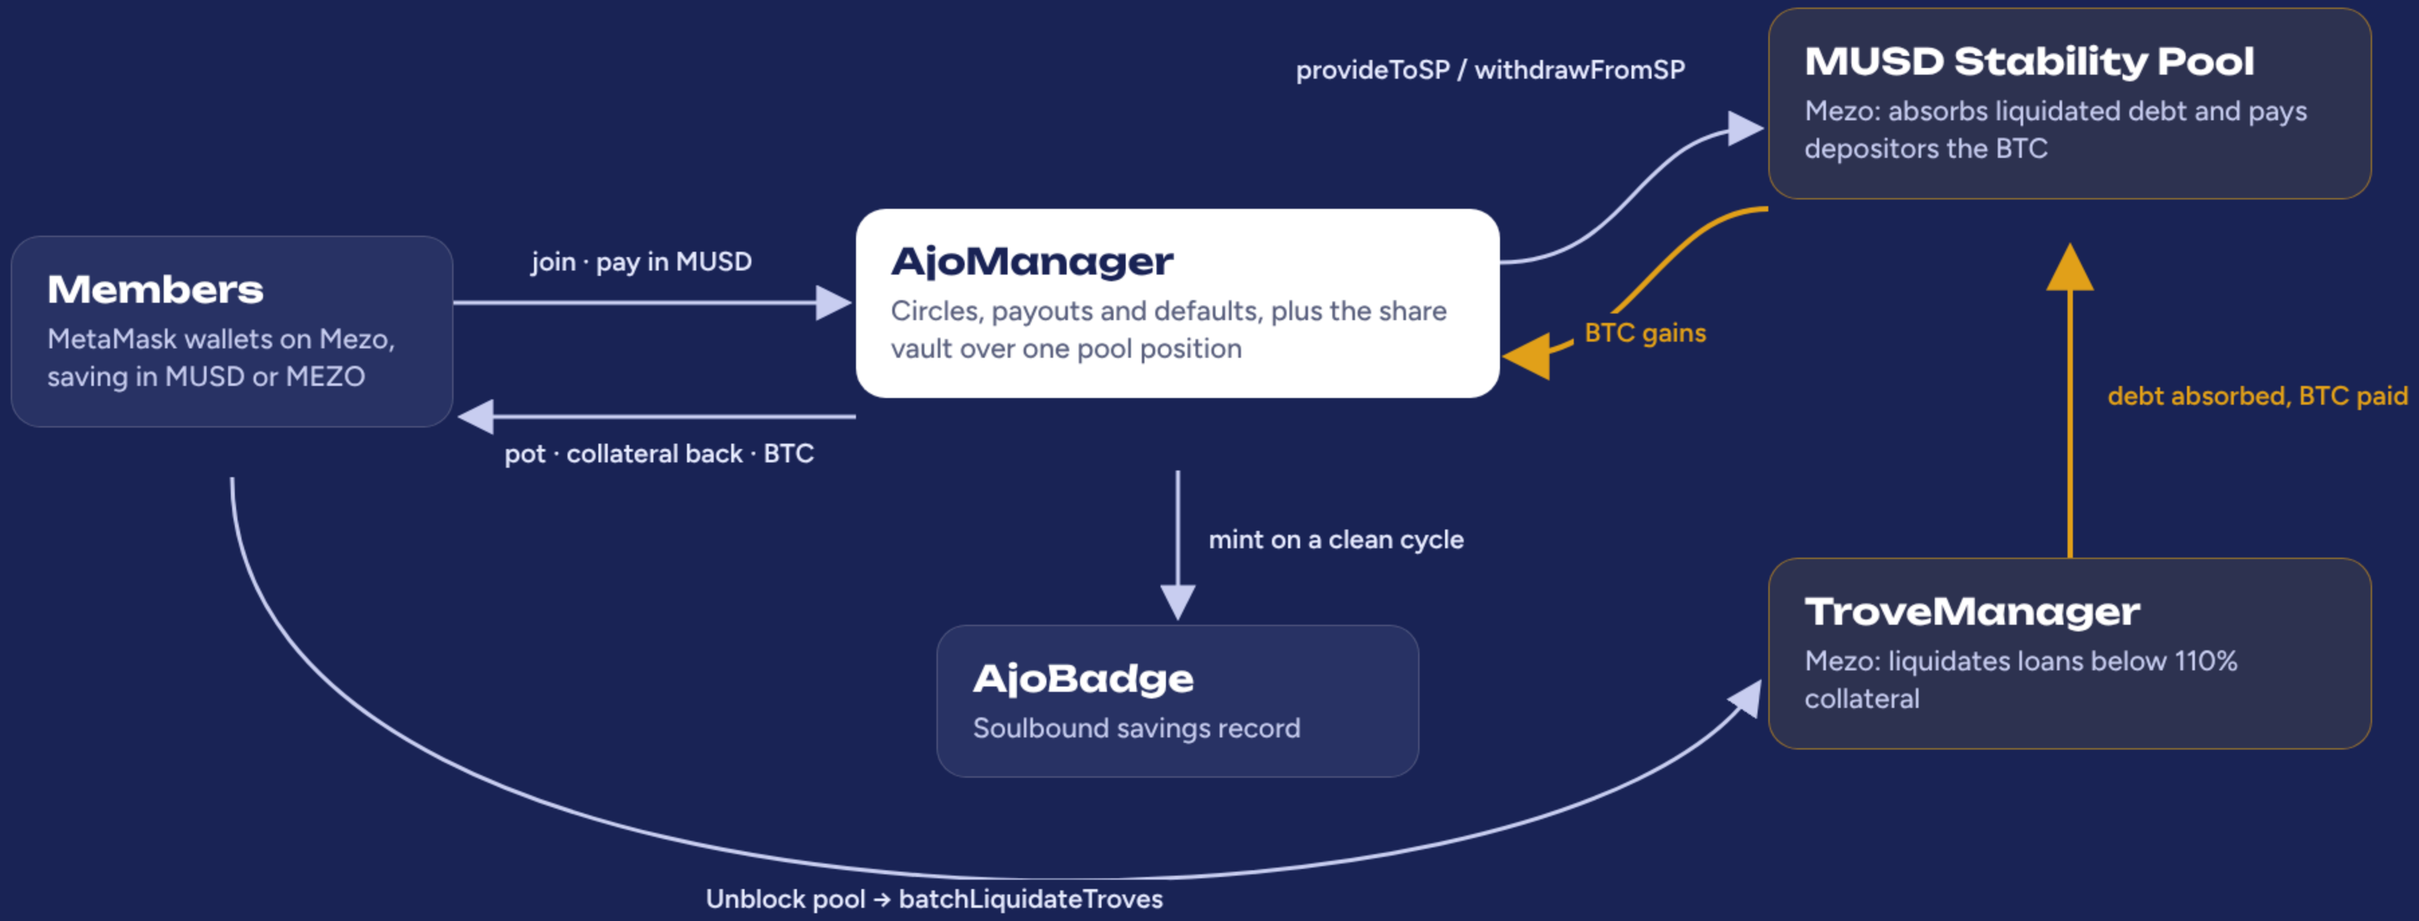

Cycle done: collateral comes back from the pool with **a share of the BTC**, and on-time savers get a **soulbound badge**.

Cycle complete. Collateral comes back from the pool with a share of the BTC, and on-time savers get a badge.

Under the hood

One share-based vault splits a single Stability Pool position fairly across every circle.

- 11 Foundry tests: liquidations, defaults, paused pool
- 8 Hardhat tests

WHY IT MATTERS

What AjoChain brings Mezo

Lasting MUSD demand

Savers hold MUSD for the length of a cycle, not just for a trade.

Stability Pool liquidity

Every running circle’s collateral sits in the pool, helping absorb liquidations.

Users where they already save

Ajo savers in Nigeria and West Africa, and the diaspora saving with family back home.

A path into Mezo Borrow

BTC holders can borrow MUSD to join, and savings badges can become a credit signal.

ROADMAP

From testnet to traders

Dec 2026

Pilot MUSD circles with Lagos market traders. One-click “borrow MUSD against BTC and join”. Telegram reminders before deadlines.

Q1 2027

Security review of AjoManager and the vault. Mezo mainnet launch. Savings badges as a credit signal for Mezo borrowing.

Q2 2027

Naira on- and off-ramp to MUSD through ShopSwift’s payment rails, so members pay in and cash out in naira.
